

Quick Look: Current Activities

SIVAC

The SIVAC (Supporting Independent Immunization and Vaccine Advisory Committees) Initiative assists in the establishment or strengthening of National Immunization Technical Advisory Groups (NITAGs) in GAVI-eligible and middle-income countries.

ADVIM

Established in 2009, ADVIM is a three-year program to improve advocacy for vaccines and immunization financing in Benin, Burkina Faso, and Côte d'Ivoire.

Africhol

Africhol seeks to determine the incidence of cholera in sub-Saharan Africa through the creation of a surveillance network in eight countries.

PneumoTone

A collaborative effort between AMP and the Togolese government, PneumoTone is a surveillance study to estimate the burden of pneumococcal pneumonia and meningitis among all age groups in a northern district of Togo.

EPIVAC®

Created in 2002, EPIVAC® is a two-year degree course through the University of Cocody-Abidjan and Paris-Dauphine University designed to improve immunization programs in GAVI-eligible countries. It involves on-the-job training for district medical officers in vaccinology and health services management as well as technical support to countries.

Collaborating with public and private partners to improve health and well-being

© Cliff Parnell

Catalyzing Change in Public Health

Over the past decade, governments and donors have committed substantial resources to improving the health of the world's poor. Despite considerable progress, at least two million people die each year from vaccine preventable diseases—the majority of them young children in the developing world.

In this context, AMP works to overcome challenges to immunization and public health, from cold chain logistics to health worker training and capacity.

The AMP Mission

AMP is dedicated to improving the health and well-being of those most in need across the globe. Along with our public- and private-sector partners, we:

- Enhance scientific knowledge in support of evidence-based health policies
- Strengthen immunization service delivery, logistics, and innovation
- Develop human and institutional capacity for improved health system performance

Achieving More Together

Since its creation in 1972, AMP has focused on fieldwork in collaboration with local, regional, and international stakeholders. Through this approach, AMP is actively bridging the gap between the public and private sectors to achieve more for global health.

LaboMobil, a mobile microbiology lab, helps countries to strengthen disease surveillance and outbreak response in remote areas.

What We Do

Vaccinology Research

AMP carries out studies to provide decision makers with the information they need to determine optimal immunization policies. Focus areas include:

- Disease Burden & Surveillance
- Field-based Vaccine Evaluations
- Pharmacovigilance
- Health Economics & Financing
- Medical Anthropology
- Laboratory Capacity Development

Immunization Services Strengthening

AMP contributes to improving vaccine delivery and coverage in developing countries through:

- Immunization Program Support
- Logistics & Supply Chain Management
- Supervised On-the-Job Training
- Technology Field Testing

Health Policy & Advocacy

AMP works to promote culturally relevant immunization policies, increase awareness of public health issues, and advocate for a better use of resources. We provide support in two key areas:

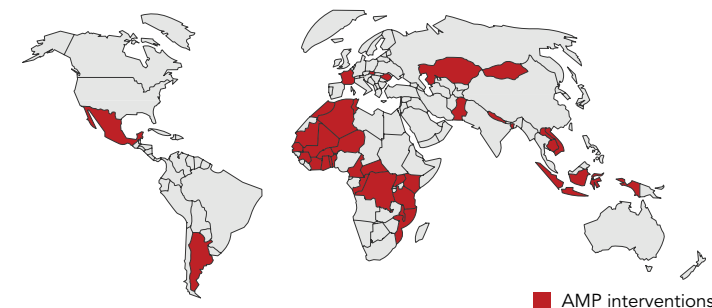

- Institutional Development
- Advocacy for Immunization

Human Resources for Health

To help overcome the global health worker shortage, AMP supports:

- Human Resources Management (HRM)
- Professional Network Development
- Training Design & Delivery
- E-learning

Where We Work

AMP arrived in West Africa in 1972 and has since expanded its activities to other parts of Africa as well as the Americas, Europe, and Southeast Asia.

Through 2010, AMP works or has worked in more than 30 low- and middle-income countries worldwide. It implements its programs and projects in major capitals as well as remote areas. The majority of AMP's offices are located in the field in Africa and Southeast Asia to ensure close collaboration with local stakeholders, from governments to regional organizations and community groups.
